EXP. NO: 6

BUILDING AN ANONYMOUS FTP SCANNER USING PYTHON

AIM:

To develop a python-based anonymous FTP Scanner using the built-in ftplib module and determine whether an FTP server points anonymous access.

STEPS:

STEP 1: Ensure python Installation

STEP 2: Create a python file named anonymous_ftp_Scanner.py

STEP 3: Import ftplib Module

STEP 4: WRITE Scanner program

STEP 5: Run the program using python anonymous_ftp-scanner.py

RESULT:

Thus the python-based anonymous FTP Scanner using built-in ftplib module is implemented successfully.

```python
from ftplib import FTP
from ftplib import all_errors

def anonymous_ftp_scan(host, port=21):
    print("=" * 50)
    print("        ANONYMOUS FTP SCANNER")
    print("=" * 50)

    print(f"Target: {host}")
    print(f"Port  : {port}")
    print()

    ftp = FTP()

    try:
        print("[1] Connecting to FTP server...")

        ftp.connect(host, port, timeout=10)

        print("[+] FTP server is reachable")
        print("[+] Server response:", ftp.getwelcome())

        print("\n[2] Testing anonymous login...")

        ftp.login(user="anonymous", passwd="anonymous@example.com")

        print("[+] Anonymous login SUCCESSFUL")
        print("[!] The FTP server permits anonymous access.")

        print("\n[3] Checking accessible directory...")

        files = ftp.nlst()

        if files:
            print("[+] Directory listing is available:")
            for item in files:
                print("  ", item)
        else:
            print("[-] Directory is empty or listing is unavailable.")

        ftp.quit()

    except all_errors as error:
        print("[-] Anonymous login failed or FTP connection failed.")
        print("[!] Error:", error)

        try:
            ftp.close()
        except:
            pass

# Enter an authorized FTP server here
target = input("Enter FTP server address: ")

anonymous_ftp_scan(target)
```

```
[3] Checking accessible directory...
[+] Directory listing is available:
